ABOUT THIS GUIDE

This Guide provides part number information for various parts which may be required during a repair. The part number listings are divided by Models (Sales Designation) and where various Models share the same part numbers, they are listed together.

This Parts Guide is divided into four sections:

Mechanical Parts - divided by repair groups with each group divided by Models

Collision Parts - divided by Models

Accessories - divided by item

Fluids And Lubricants - divided by item

To find a part, refer to the Table Of Contents to determine the repair group and model page number.

MECHANICAL PARTS

The Mechanical Parts Section provides part numbers for items used in various repairs such as Brakes, Maintenance Parts, Clutch, etc. The first page of each group contains an illustration of the parts covered by that group. This illustration is used to identify the nomenclature used for the various parts in the group. This illustration is general and does not represent all types of parts, vehicles, or engines covered by the particular section.

The column headings are:

DESCRIPTION - provides the nomenclature and application of the part. Where parts differ between Models, VINs, engines, etc., the application of the part will be stated in this column. Where the VINs or engine numbers are excessive, there will be a note listed in the NOTE column. The Note will be found at the end of each Model group as necessary.

PART NUMBER - the actual part number to be ordered for that particular item. This column will list the latest part number at the time of printing. If the number is superseded after printing, you may receive the substitute part number or the original part number depending on which part is available.

NOTES - this column will provide additional information needed in determining the correct part number. When **OPTIONAL** is listed in this column, the parts are interchangeable. This column will also reference other Notes which pertain to the application of the part or methods in determining the correct part number. These Notes will be found at the end of each Model group listing as necessary.

COLLISION PARTS

The Collision Parts Section provides information for the parts needed to repair a vehicle after a collision. This Section is divided by Models and where different Models use the same parts, they are listed together.

Each page contains an overall illustration of the vehicle with key numbers for the major items or individual items which may be required by themselves. The doors are shown as exploded view illustrations with the various items grouped with key numbers. The illustrations are general and may not show all models covered by a particular section.

The column headings are:

KEY NO. - Refers to the key number used on the illustration.

DESCRIPTION - provides the nomenclature and application of the part. Where parts differ between Models, VINs, etc., the application of the part will be stated in this column. Where the VINs are excessive, there will be a note listed in the NOTE column. The Note will be found at the end of each Model group as necessary.

ABOUT THIS GUIDE

The major item and related items will be listed under one Key No. along with the sub-parts for a major item.

PART NUMBER - the actual part number to be ordered for that particular item. This column will list the latest part number at the time of printing. If the number is superseded after printing, you may receive the substitute part number or the original part number depending on which part is available.

NOTES - this column will provide additional information needed in determining the correct part number. When **OPTIONAL** is listed in this column, the parts are interchangeable. This column will also reference other Notes which pertain to the application of the part or methods in determining the correct part number. These Notes will be found at the end of each Model group listing as necessary.

For items which are supplied color-matched, the column will state "PROVIDE COLOR CODE". Refer to Vehicle Identification Information to determine the location of the color code. For key locks, this column will state "PROVIDE KEY CODE". This code can be obtained from the Vehicle Data Card.

PAINT AND REPAIR MATERIALS

This section provides part numbers for paint, repair materials, etc. used in repairing the vehicle after a collision or paint damage repair. Also included in this section is a listing of Car Care Products which Mercedes Benz supplies.

The column headings are:

DESCRIPTION - provides the nomenclature and application, if needed, for the materials. Where color codes are required, this column will state "PROVIDE COLOR CODE". Refer to Vehicle Identification Information to determine the location of the color code.

QUANTITY - provides the quantity of the material supplied for the part number provided.

PART NUMBER - the actual part number to be ordered for that particular item. This column will list the latest part number at the time of printing. If the number is superseded after printing, you may receive the substitute part number or the original part number depending on which part is available.

EXCHANGE ITEMS

Exchange items are identified by the last two digits; example: Starter Part Number 002 151 97 01 88. The "88" identifies this item as an exchange unit. Contact your Mercedes-Benz dealer for information on exchange units.
